
NATURAL STONE

Care & Maintenance

Thank You for purchasing your countertops from Classic Rock Fabrication

With a little care, the suggestions listed below will keep your countertops looking beautiful for years to come.

+ Four Simple Ways To Protect Your Stone Countertops

- Use coasters under all glasses, particularly those containing alcohol or citrus juices.
- While many stones can withstand heat, the use of trivets or hot plates is recommended.
- When spills occur, blot the spill with a paper towel immediately. Don't wipe the area, it will spread the spill. Flush the area with water and mild soap and rinse several times. Dry the area thoroughly with a soft cloth. Repeat as necessary.
- Clean stone surfaces with a neutral cleaner, stone soap, or a mild liquid dishwashing detergent and warm water. Use a clean rag and soft cloth for best results. Rinse the surface thoroughly after washing with soap and dry with a soft cloth.

+ Cleaning Precautions

- Products containing lemon, vinegar, or other acids may dull or etch calcareous stones (marble, travertine, limestone, onyx, quartzite).
- Scouring powders or creams often contain abrasives that may scratch certain stones.
- Do not mix ammonia and bleach. This combination creates a toxic and lethal gas.

+ Sealing Natural Stone

- Sealing is a common step taken on some stones as an extra precaution against staining. Sealing does not make the stone stain proof; it makes the stone more stain resistant.
- If you have not purchased Dry Treat, you will need to re-seal your countertops yearly. We recommend doing so when you set your clocks back so you are on a routine schedule. Dry Treat does not protect from etching.
